Short term /liquidity ratios

2023

Current Assets(P5) LE 163,783,564,267

Current Liabilities(P6) LE 129,183,990,299

Inventory(P5) LE 1,143,280,325

Cash and Bank Balances(P5) LE 7,501,393,941

2024

Current assets= LE 233,718,336,455

Current liabilities= LE 170,948,022,311

Cash(on hand and bank)= LE 44,915,515,409

Inventory= LE 3,440,526,055

Current ratio		
2023	Current ratio = Current Assets / Current Liabilities =163,783,564,267/129,183,990,299= <u>1.26783175</u>	For every 1 Egyptian Pound of debt TMG has 1.27 LE in asset that covers the dept.
2024	Current ratio =233,718,336,455 / 170,948,022,311= <u>1.367</u>	A ratio of 1.367 indicates that TMG is in a healthy position, which means that it holds approximately 1.36 L.E in current assets for each 1 L.E in current liabilities.

TMG's current ratio declined from **1.37 in 2023 to 1.27 in 2024**, suggesting a deliberate tightening of liquidity rather than weakness. While current assets fell, this was driven mainly by aggressive deployment of cash into development properties and long-term investments, not rising short-term risk. Given TMG's heavy reliance on customer advances and installment collections, a ratio comfortably above 1 still reflects strong short-term solvency..

Quick ratio

2023	Quick ratio = (Current Assets- Inventory) / Current Liabilities =(163,783,564,267- 1,143,280,325)/129,183,990,299=<u>1.25898173</u>	<i>Even if TMG failed to sell another unit of its current inventory, it still has more than enough liquid to settle its debts and bills.</i>
2024	Quick ratio=(233,718,336,455 – 3,440,526,055) / 170,948,022,311 = <u>1.347</u>	<i>A ratio of 1.347 means that for every 1 L.E of short debt, the company has a approximately 1.35 of cash assets. It suggests that the company can today payoff all its liabilities without the need to sell any inventory or property.</i>

TMG's current ratio declined from **1.37 in 2023 to 1.27 in 2024**, suggesting a deliberate tightening of liquidity rather than weakness. While current assets fell, this was driven mainly by aggressive deployment of cash into development properties and long-term investments, not rising short-term risk. Given TMG's heavy reliance on customer advances and installment collections, a ratio comfortably above 1 still reflects strong short-term solvency..

Net Working Capital		
2023	Net Working Capital = Current Assets - Current Liabilities =163,783,564,267- 129,183,990,299=<u>34,599,573,968</u>	<i>TMG has internal funds to finance its ongoing construction projects and daily operations without necessarily relying on new external debt.</i>
2024	Net working capital= 233,718,336,455 - 170,948,022,311= <u>62,770,314,144</u>	<i>A net working capital of over 62 billion shows that TMG has a massive surplus of short term assets that can fund day-to-day operations.</i>

Net working capital decreased from **LE 62.8 bn in 2023 to LE 34.6 bn in 2024**. Cash was redirected into land, construction, acquisitions, and real estate investments following the

adoption of EAS 34, while operating cash inflows remained strong. TMG still retains a very large positive buffer, indicating it can fund operations internally without short-term borrowing.

Cash ratio		
2023	Cash ratio = Cash and Bank Balances / Current Liabilities =7,501,393,941/129,183,990,299= <u>0.05806752</u>	<i>The low cash ratio indicates that TMG relies on the steady collection of receivables and customer advances to fund its immediate cash needs rather than keeping a massive cash.</i>
2024	Cash ratio = 44,915,515,409 / 170,948,022,311= <u>0.262</u>	<i>A cash ratio of 0.262 means that for every 1L.E of current debt, the company has over 0.26 L.E in pure cash to pay it off immediately.</i>

The cash ratio dropped sharply from **0.26 in 2023 to 0.06 in 2024**, reflecting a clear shift in cash deployment strategy. In 2024, TMG converted the cash into development properties, acquisitions, and financial investments, supported by strong operating cash flows of LE 43.8 bn. This low ratio does not indicate liquidity risk, as TMG's model depends on continuous customer collections rather than holding large cash balances.

Long-term solvency/ financial leverage

2023

Total Assets(P5) LE 202,034,498,021

Total Liabilities(P6) LE 163,018,723,235

Total Equity(P5) LE 39,015,774,786

Total Debt (P6)

= non-current loans + bank overdrafts current + credit facilities current + Loans (Current Portion) = 9,585,544,247 + 6,375,538 + 985,730,454+ 567,525,695 =

LE 11,145,175,934

EBIT (Earnings Before Interest and Taxes) (P7)

= Net profit for the year before tax + Finance expenses = 5,022,386,265 + 1,339,662,765 = LE 6,362,049,030

Interests (Finance expenses)(P7) LE 1,339,662,765

Depreciation and Amortization(P7) LE 491,823,556

2024

Total assets= LE 356,781,348,798

Total liabilities= LE 225,299,121,786

Total equity= LE 131,482,277,012

EBIT= LE 19,448,283,588

Interest expense= LE 1,368,383,007

Depreciation & amortization= LE 1,119,290,597

Total dept ratio		
2023	Total dept ratio = Total Liabilities / Total Assets = =163,018,723,235 /202,034,498,021= <u>0.806885581</u>	<i>This shows that 81% of TMG's total assets are financed by liabilities (creditors, suppliers, and customers), while only 19% are financed by shareholders. For TMG, this is a positive sign of high sales demand rather than a sign of financial distress.</i>
2024	Total debt ratio= 225,299,121,786 / 356,781,348,798 = <u>0.631</u>	<i>A total debt ratio of 0.63 indicates that approximately 63% of the company total assets are financed by liabilities, while the remaining 36.9% is financed by equity.</i>

TMG's total debt ratio increased from **0.63 in 2023 to 0.81 in 2024**, primarily due to a rise in non-interest-bearing liabilities such as customer advances and suppliers, not bank debt. This reflects strong sales force and large off-plan collections, which inflate liabilities while reducing financing cost. In TMG's context, higher leverage signals market demand and scale expansion rather than financial weakness

Equity ratio		
2023	Equity ratio = Total Equity / Total Assets = $= 39,015,774,786 / 202,034,498,021 =$ <u>0.193114419</u>	<i>For every LE 1.00 of assets, shareholders own LE 0.19 (19%) outright.</i>
2024	Equity ratio = $131,482,277,012 / 356,781,348,798 =$ <u>0.368</u>	<i>A total equity ratio of 0.36 indicates that approximately 36% of the groups total assets are financed by its equity while the remaining 63% if financed by liabilities.</i>

The equity ratio fell from **36.8% in 2023 to 19.3% in 2024**, largely due to merging effects, minority interest growth, and asset revaluation under EAS 34. While this suggests heavier reliance on liabilities, it is consistent with TMG's strategy of leveraging customer prepayments and long project cycles. Equity value in absolute terms increased significantly, indicating reduction in ratio, not friction in shareholder wealth.

Dept/Equity ratio		
2023	Dept/Equity ratio = Total Debt / Total Equity = $= 11,145,175,934 / 39,015,774,786 =$ <u>0.285658198</u>	This ratio (0.29) proves that TMG is mostly funded by its customers, not by banks, which makes the company very stable.
2024	Debt to equity = $225,299,121,786 / 131,482,277,012 =$ <u>1.713</u>	<i>A debt to equity ratio of 1.713 indicates that for every 1 L.E of equity, the company has 1.7 L.E of liabilities</i>

Debt-to-equity declined sharply from **1.71 (2023) to 0.29 (2024)**. TMG is far less dependent on bank financing and instead funded growth through internally generated cash and customer advances. This significantly lowers financial risk and interest exposure despite the company's massive asset base.

Equity multiplier		
2023	Equity multiplier = Total Assets / Total Equity = =202,034,498,021/39,015,774,786= <u>5.17827723</u>	<i>TMG has managed to grow an asset base that is 5.18 times larger than its equity.</i>
2024	Equity multiplier = 1 + 1.713 = <u>2.713</u>	<i>An equity multiplier ratio of 2.713 indicates that for every 1L.E, the group is supporting with approximately 2.7L.E in total assets.</i>

The equity multiplier rose from **2.71 in 2023 to 5.18 in 2024**, indicating higher financial leverage at the asset level. However, this leverage is largely operational rather than financial, driven by customer funding and long-term liabilities tied to real estate. The increase expands shareholder returns without proportionally increasing interest risk, reflecting efficient capital structuring.

Times Interests Earned		
2023	Times Interests Earned = EBIT / Interests = 6,362,049,030 /1,339,662,765 = <u>4.74899295</u>	<i>TMG can pay its interest 4.75 times over using its operating profit.</i>
2024	Times interest earned = 19,448,283,588 / 1,368,383,007 = <u>14.212</u>	<i>A times interest earned ratio of approximately 14 means that the company earns roughly 14 times more than it needs to cover up its annual interest payments.</i>

Interest coverage declined from **14.2x in 2023 to 4.75x in 2024**, but this remains a very comfortable level. The reduction is due to higher financing activity and lower EBIT relative to the expanded asset base, not distress. Even at this level, TMG generates nearly five times its interest obligations from operations, indicating strong debt-servicing base.

Cash coverage		
2023	Cash coverage = (EBIT + Depreciation)/interests = =(6,362,049,030+491,823,556)/ 1,339,662,765= <u>5.11611785</u>	<i>For every LE 1.00 of interest TMG owe, they generate LE 5.12 in cash-equivalent operating profit.</i>

2024	Cash coverage= $(19,448,283,588 + 1,119,290,597) / 1,368,383,007 =$ <u>15.030</u>	<i>A cash coverage ratio of 15.030 indicates that the Group generates approximately 15 times the cash needed to cover its interest expenses from its operating activities before taxes.</i>
------	---	---

Cash coverage fell from **15.0x in 2023 to 5.1x in 2024**, reflecting lower depreciation and increased interest costs. Still, coverage above 5x confirms that operating cash flows comfortably absorb financing costs. Given TMG's strong operating cash generation in 2024, this ratio remains stable for a capital-intensive real estate group.

Assets management/ turnover ratio

2023

Sales (Total Revenue)(P7)

= Real Estate Development revenue + Hospitality revenue + Revenues from activities with periodic yield and service activities = 21,578,730,465 + 3,540,936,070 + 3,311,733,995 =

LE 28,431,400,530

Cost of Goods Sold (Total Costs)(P7)

= Real Estate Development costs + Hospitality costs + costs of activities with periodic yield and service activities = 15,665,631,650 + 2,001,820,412 + 2,126,616,776 =

LE **19,794,068,838**

Net Income (Net profit for the year after tax)(P7)

LE 3,347,282,299

Receivables and notes receivables(P5)

LE 9,907,968,213

Notes receivables for units not yet delivered(credit sales)(P5)

LE 37,479,203,176

2024

COGS=

LE 27,369,963,746

LE 3,440,526,055

Credit sales=

LE 27,648,152,656

Accounts receivables= LE 17,786,055,837

Sales= LE 42,670,283,288

Total assets= LE 356,781,348,798

Inventory turnover		
2023	Inventory turnover =costs of goods sold / inventory =19,794,068,838/ 1,143,280,325= <u>17.3133994</u>	Turnover of 17.31 is high, indicating that TMG is very efficient at moving its inventory, o this high turnover primarily reflects the speed of completed unit sales sectors
2024	Inventory turnover= 27,369,963,746 / 3,440,526,055 = <u>7.955</u>	Inventory turnover I how many times the company sold its units, an inventory turnover of approximately 8 is high as it suggests that the group sold its inventory 8 times this year.

Inventory turnover surged from **8.0x in 2023 to 17.3x in 2024**, signaling a major acceleration in unit sales and project delivery. This improvement reflects stronger demand, faster project cycles, and more efficient monetization of completed properties. For a real estate developer, such a high turnover is exceptional.

Days sales in inventory		
2023	Days sales in inventory = 365/Inventory turnover =365/17.3133994 = <u>21.0819373</u>	It only takes TMG to sell its inventory in 21 days
2024	Days sales in inventory= 365 / 7.955 = <u>45.883</u>	The day sales in inventory indicates how much it took to sell the inventory, a result of 45.8 days indicates that it took TMG only 45 days to sell the inventory.

Days inventory improved from **46 days in 2023 to 21 days in 2024**, showing that properties are being sold or transferred significantly faster. This reduces holding costs, improves cash conversion, and lowers exposure to market instability. The improvement aligns with TMG's strong sales momentum and brand dominance.

Receivables turnover		
2023	Receivables turnover = credit sales / accounts receivables = 37,479,203,176 / 9,907,968,213= <u>3.78273349</u>	<i>A ratio of 3.78 indicates that TMG collects its average receivables roughly 4 times a year, TMG offers long-term installment plans (often 5–10 years), so this is healthy turnover rate.</i>
2024	Receivables turnover = 27,648,152,656 / 17,786,055,837 = <u>1.554</u>	<i>A Receivables Turnover ratio of 1.554 for the year indicates that the Group collected its average trade and notes receivable approximately 1.5 times during the year.</i>

Receivables turnover increased from **1.55x in 2023 to 3.78x in 2024**, indicating faster cash collection despite long installment plans. This reflects improved collection discipline and a healthier receivables mix. In an industry where 5–10 year payment plans are common, this improvement is particularly strong.

Days sales in receivables		
2023	Days sales in receivables = 365/ receivables turnover = =365/3.78273349= <u>96.4910695</u>	<i>An average collection period of 96 days is quite strong, While many customers pay over years TMG collects cash within this period shows a steady stream of collections.</i>
2024	Days sales in receivables turnover = 365 / 1.554 = <u>234.877</u>	<i>A Days Sales in Receivables (DSO) of 234.877 for the year tells you that, on average, it takes TMG Holding about 235 days to collect cash after a sale.</i>

Day sales in receivables declined from **235 days in 2023 to 96 days in 2024**, highlighting a major enhancement in liquidity conversion. This shows that although TMG sells on credit, cash is being realized much earlier, strengthening operating cash flows and reducing reliance on external funding.

Total asset turnover		
2023	Total asset turnover = sales/ total assets =	For every LE 1.00 in assets, TMG generates 14

	$=28,431,400,530/202,034,498,021 =$ <u>0.140725474</u>	piasters in sales, Because its an asset-heavy industry they hold billions in assets to generate revenue over long project cycles
2024	Total assets turnover= $42,670,283,288 / 356,781,348,798 =$ <u>0.119</u>	<i>A Total Assets Turnover of 0.119 for 2024 indicates that for every LE 1.00 of assets the Group owns, it generates about LE 0.12 in revenue.</i>

Asset turnover rose from **0.12 in 2023 to 0.14 in 2024**, a improvement for an asset-heavy real estate group. This indicates that newly deployed assets are beginning to generate revenue, validating TMG's aggressive investment and expansion strategy.

Capital intensity ratio		
2023	Capital intensity ratio = total assets / sales= $=202,034,498,021/28,431,400,530=$ <u>7.10603397</u>	<i>TMG requires LE 7.11 in assets to produce LE 1.00 of annual revenue. This confirms that the business is highly capital-intensive, requiring massive upfront investment in land and construction before revenue is made.</i>
2024	Capital intensity ratio= $356,781,348,798 / 42,670,283,288=$ <u>8.361</u>	<i>It indicates that for TMG Holding to generate LE 1.00 of revenue, it must deploy LE 8.36 in assets.</i>

Capital intensity increased from **8.36 in 2023 to 7.11 in 2024**, meaning TMG now requires fewer assets to generate each pound of revenue. This indicates better utilization of land banks, faster project execution, and improved revenue recognition.

Profitability ratios

Profit margin		
2023	Profit margin = net income / sales =	<i>TMG keeps nearly 12% of its revenue as clear profit for its shareholders after</i>

	$=3,347,282,299/28,431,400,530=$ <u>0.117731882</u>	<i>paying for all construction costs, marketing, administration, and taxes</i>
2024	Profit margin = 14,467,525,731 / 42,670,283,288 = <u>0.339</u>	<i>It indicates that for every 1 LE of revenue recognized, the company keeps 0.34 LE as pure profit.</i>

TMG's profit margin expanded from **about 7.8% in 2023 to 33.9% in 2024**, marking a huge shift in profitability rather than normal year-to-year improvement. In 2023, margins were constrained by the heavy cost burden of ongoing developments. In contrast, 2024 represents a monetization phase, supported by higher-margin unit deliveries, strong pricing amid inflation, and significant non-operating gains such as investment property revaluations following the adoption of EAS 34. This sharp margin expansion indicates that TMG successfully translated years of capital accumulation into earnings.

ROA		
2023	ROA = net income / total assets = $=3,347,282,299/202,034,498,021 =$ <u>0.016567875</u>	<i>An ROA of 1.66% might seem low compared to other industries, but for a company with LE 202 billion in assets, it represents a substantial profit of LE 3.3 billion. It reflects the reality of the real estate sector where profit is spread across very large, long-term asset bases.</i>
2024	Return on assets = $14,467,525,731 / 356,781,348,798 =$ <u>0.0405</u>	<i>The company is only generating 4 EGP of profit for every 100 EGP of assets it owns.</i>

ROA more than doubled from **approximately 1.7% in 2023 to 4.05% in 2024**, a very strong outcome for an asset-heavy real estate group. The low ROA in 2023 suggest the scale of assets under development that had not yet begun generating income. In 2024, a meaningful portion of those assets transitioned into revenue improving overall asset productivity. This jump confirms that TMG's expanding asset base is increasingly efficient, validating large-scale investments in land, construction, and hospitality assets.

ROE		
2023	ROE = net income/ total equity =	<i>At 8.58%, TMG is providing a decent return on the</i>

	=3,347,282,299/ 39,015,774,786= <u>0.0857930495</u>	<i>capital invested by shareholders. This ratio is significantly higher than the ROA (1.66%) because the company effectively uses mostly interest-free customer prepayments to boost the final return for its owners.</i>
2024	Return on equity= 14,467,525,731 / 131,482,277,012 = <u>0.110</u>	<i>The company is generating an 11% return on the money specifically belonging to shareholders.</i>

ROE improved from **about 8.6% in 2023 to 11.0% in 2024**, showing that shareholders benefited directly from the increase in profitability despite a significant increase in equity. In 2023, returns were moderate due to lower earnings and a growing equity base. In 2024, profit growth increased equity expansion, driven by strong operating performance and rather than higher financial risk. The widening gap between ROE and ROA in 2024 indicates TMG's effective use of customer advances and non-interest- liabilities to enhance shareholder returns without excessive reliance on bank debt, making the improvement in ROE both efficient and sustainable.

Market value ratios

2023

Number of Shares = issued and paid-up capital(P5)/ the par value of each share(P52)

= 20,635,622,860/ 10 = **2,063,562,286 shares**

Book value per share= LE 34.288

Market value per share= LE 74.699

Price to earning ratio		
2023	Price to earnings ratio = price per share / earnings per share = 24/1.46 = <u>16.4383562</u>	<i>At a price of LE 24, the market is paying 16.44 times TMG's annual earnings.</i>
2024	Price earnings ratio= 74.70 / 4.68 = <u>15.961</u>	<i>A ratio of 15.961 indicates that the selling price of the stock is approximately 16x more than the gained earnings</i>

The P/E ratio remained stable, moving from 16.44 in 2023 to 15.96 in 2024. This ratio indicates that at a stock price of LE 24 in 2023 and LE 74.70 in 2024, the market was willing to pay approximately 16 times the company's annual earnings for a single share. This consistency suggests that investor valuation of TMG's earnings power remained steady despite significant price growth.

Price sales ratio		
2023	Price sales ratio = price per share / sales per share= 24/ 13.78= <u>1.74165457</u>	<i>This shows how much investors are paying for every LE 1 of sales.</i>
2024	Price sales ratio= 74.40 / 20.677 = <u>3.598</u>	<i>A ratio of 15.961 indicates that the selling price of the</i>

		<i>stock is approximately 16x more than the gained earnings</i>
--	--	---

This ratio saw a significant increase, rising from 1.74 in 2023 to 3.60 in 2024. It measures how much investors are willing to pay for every LE 1 of the company's sales. The sharp rise indicates that the market placed a much higher premium on the group's revenue generation in 2024 compared to the previous year.

Market to book ratio		
2023	Market to book ratio = market value per share(price per share) / book value per share = = 24/18.58= <u>1.29171152</u>	<i>This compares the market price (LE 24) to the accounting value (LE 18.91), means the market values TMG at 29% more than its physical "paper" value.</i>
2024	Market to book ratio= 7.70 / 34.288 = <u>2.178</u>	<i>A ratio of 15.961 indicates that the selling price of the stock is approximately 16x more than the gained earnings</i>

The ratio increased from 1.29 in 2023 to 2.18 in 2024. This metric compares the market price per share to its accounting (book) value. While the market valued TMG at 29% above its "paper" value in 2023, the group expanded to over double the book value by 2024, signaling a strong increase in perceived intangible value and asset quality.

Future analysis

Internal growth rate		
2023	Internal growth rate = (ROA * b)/(1-(ROA*b))= (0.016567875* 0.854122868) /(1-(0.016567875* 0.854122868))= <u>=0.0143541262</u>	<i>TMG can grow its operations and asset base by 1.44% per year using only its own profits, without needing to take out any new bank loans or issue more shares.</i>
2024	Internal growth rate= (0.0405 x 0.8898) / 1 - (0.0405 x 0,8898) = <u>0.03738</u>	<i>TMG can increase its assets and operations by 3.74% per year completely from its internal profits, without the need to take loans or issue shares.</i>

The internal growth rate improved from 1.44% in 2023 to 3.74% in 2024. This ratio specifies the rate at which TMG can grow its operations and asset base using only its own profits, without the necessity of taking on new bank loans or issuing additional shares.

Sustainable growth rate		
2023	Sustainable growth rate= $(ROE \times b) / (1 - (ROE \times b)) =$ $(0.0857930495 \times 0.854122868) / (1 - (0.0857930495 \times 0.854122868)) =$ <u>0.0790720304</u>	<i>At 7.91%, TMG's sustainable growth is much higher than its internal growth. This shows that TMG's financial strategy (using its leverage and customer advances) allows it to grow much faster than a company that refuses to use any form of liabilities</i>
2024	Sustainable growth rate= $(0.110 \times 0.8898) / 1 - (0.110 \times 0.8898) =$ <u>0.10849</u>	<i>TMG can afford to grow its sales and assets by 10.85% per year without needing to sell new shares or take loans from banks.</i>

This rate increased from 7.91% in 2023 to 10.85% in 2024. This indicates that TMG can afford to grow its sales and assets by nearly 11% per year without changing its financial structure or selling new equity. The TMG's strategy of customer advances allows it to grow significantly faster than its internal growth rate alone.

Du pont	
2023	Du pont = profit margin * total asset turnover * equity multiplier $= 0.117731882 \times 0.140725474 \times 5.17827723 =$ <u>0.0857930493</u>
2024	Du pont analysis= $0.339 \times 0.119 \times 2.713 =$ <u>0.109</u>

The DuPont result rose from 0.086 in 2023 to 0.109 in 2024. By breaking down the Return on Equity into profit margin, asset turnover, and financial leverage, this analysis confirms that the company became more efficient at generating returns for its shareholders

General analysis

Talaat Moustafa Group (TMG) showed strong and smart growth in 2024. The company used its cash to invest in new projects instead of keeping it in the bank, which made some short-term ratios go down, but this was a planned move, not a problem. It owes more money now, but

mostly to its customers who pay in advance, not to banks, which is a cheaper and safer way to grow.

The company became much more efficient. It sold its properties and collected money from customers much faster than before. This led to a huge jump in profits. In fact, for every pound of sales, the company kept a lot more as profit in 2024.

Because the business is doing so well, investors are willing to pay more for the company's shares. The company can also grow quickly using its own profits and customer payments, without needing to borrow heavily from banks. Overall, all the numbers show TMG is in a very healthy and powerful position, successfully turning its big investments into strong earnings.
